

Case-study 1: Impact Support

6 CLEAN WATER AND SANITATION

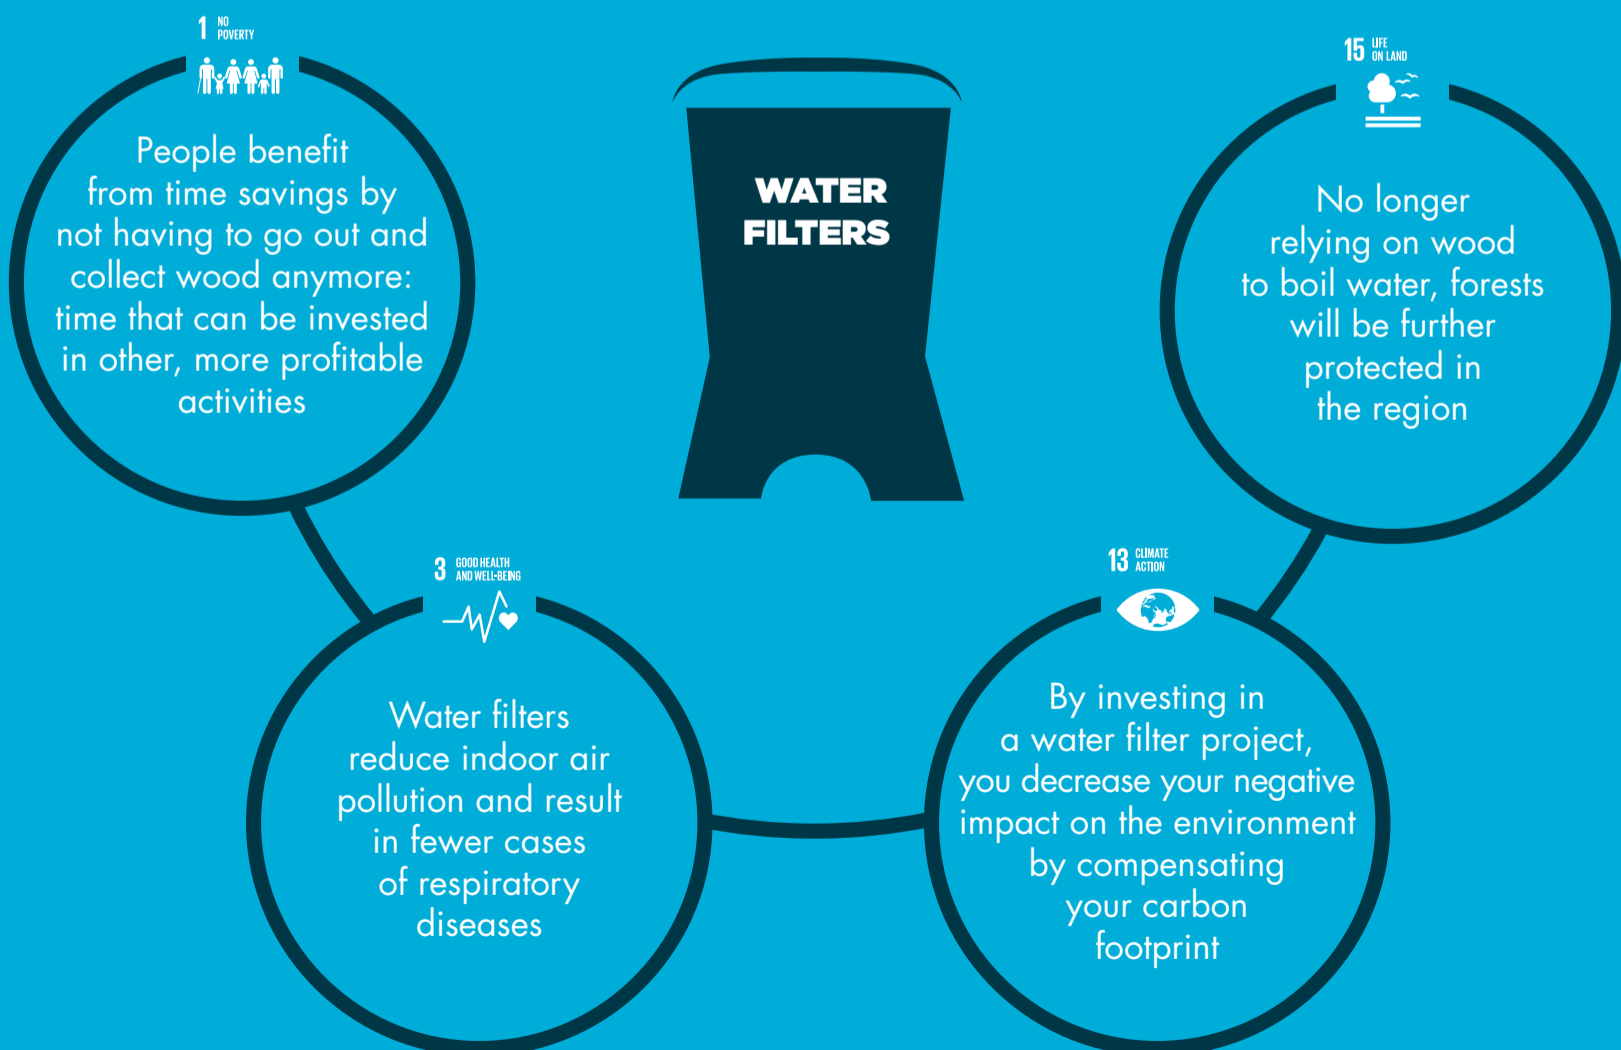

SCALE UP CLEAN WATER IN INDONESIA BY COMMITTING TO THE GLOBAL GOALS

In rural Indonesia, 80% of residents must boil their water to make it drinkable. But with the manufacture and distribution of water filters, thousands of families can be connected to safe drinking water. Social enterprise Nazava is producing these water filters, whose technology eliminates 99,9% of particles and pathogens, reducing exposure to water borne illnesses. The filters also help the environment by displacing wood and fossil fuels used to boil water.

As a business you have the opportunity to fund the production and distribution of affordable water filters, helping the social enterprise to scale up and reach more people. By increasing access to safe water, sanitation and improved hygiene, you also contribute to the protection of local forests and the reduction of indoor air pollution. Set an example and contribute to healthier, greener and social inclusive communities for your stakeholders.

INVESTING IN A WATER FILTER ACCELERATES MULTIPLE SDGS
